

Sustainability—

In this next project you will be thinking about sustainable materials. How you might rethink the use of something to make it, or the thing made from it, more sustainable.

I am not going to accept sloppy process. You must do the research, in fact, you have to present a short paper, and you must brainstorm both in words and in thumbnails.

Your statement must defend your ideas using research to support what you did.

What is sustainability?

Sustainability is based on a simple principle: Everything that we need for our survival and well-being depends, either directly or indirectly, on our natural environment. Sustainability creates and maintains the conditions under which humans and nature can exist in productive harmony, that permit fulfilling the social, economic and other requirements of present and future generations.

Sustainability is important to making sure that we have and will continue to have, the water, materials, and resources to protect human health and our environment.
